SIGMA GEN2 T8 EMERGENCY TUBE TYPE B

(CCT Selectable)

FUNCTION

How to Combine the Emergency Function and the General Lighting Function Together

1. The tube can work as general lighting, and can be turned on/off using a wall switch (during the non emergency backup mode).
2. During a power outage the emergency backup will automatically activate and provide up to 90 minutes of emergency lighting.
3. In case of abnormal emergency backup functionality during self-test function, the indicator light will start blinking.
4. This product is equipped with automatic charging function, and the indicator light shows charging status as well as the full charge status.
5. Battery transportation protection function: Press the test button three times quickly, and the battery will go into hibernation. It will also standby for 8000 hours during this hibernation.
